Advanced Human Nutrition Denis M. Medeiros 2013-12-01

Written for the upper-level undergrad or graduate level majors course, *Advanced Human Nutrition, Third Edition* provides an in-depth overview of the human body and details why nutrients are important from a biochemical, physiological, and molecular perspective. Through its writing style and numerous figures and illustrations, the Third Edition clearly outlines metabolism and the molecular functions of nutrients. A variety of pedagogical elements within the text, such as *Here's Where You Have Been* and *Here's Where You Are Going*, help clarify key points from the chapter and provide real-world examples that bring the content to life. **New and Key Features of the Third Edition:** Includes new chapters on Fiber and Nutraceuticals and Functional Foods Before You Go On sections asks students to reflect upon what they've just read, urging them to go back and re-read portions of the text if they do not readily grasp the material. Special Feature boxes on focused topics add depth to the chapter and, in some cases, allow the student to view the application of basic science. The end-of-chapter summary reiterates key points from the chapter and helps students prepare for future exams."

A cancer-related checkup is recommended every 3 years for people aged 20 to 40 and every year for people aged 40 or older. This exam should include health counseling and, depending on a person's age and gender, might include examinations for cancers of the thyroid, oral cavity, skin, lymph nodes, testes, or ovaries, as well as for some nonmalignant diseases. A high dietary intake of vitamin C has been shown to significantly reduce the risk of death from heart attacks and strokes, as well as all other causes including cancer. Many clinical and experimental studies have clearly demonstrated that stress, personality, attitude, and emotion are etiologic or contributory in suppressing the immune system as well as leading to the development of many diverse diseases. Regular exercise has been demonstrated to provide benefit to individuals with immunodeficiency diseases, particularly through stress alleviation and mood enhancement. HIV-positive individuals had increases in CD4, CD8, and natural killer (NK) cells immediately following aerobic exercise. Melatonin exerts significant anticancer effects,

especially against breast cancer. Vitamin E not only improves insulin action, it also exerts a number of beneficial effects when taken at dosages ranging from 400 to 800 IU, which may aid in preventing the long-term complications of diabetes. Find out all of this and more in The Encyclopedia of Natural Medicine!
