Cursive Script Text Recognition in Natural Scene Images Saad Bin Ahmed 2019-11-21 This book offers a broad and structured overview of the state-of-the-art methods that could be applied for context-dependent languages like Arabic. It also provides guidelines on how to deal with Arabic scene data that appeared in an uncontrolled environment impacted by different font size, font styles, image resolution, and opacity of text. Being an intrinsic script, Arabic and Arabic-like languages attract attention from research community. There are a number of challenges associated with the detection and recognition of Arabic text from natural images. This book discusses these challenges and open problems and also provides insights into the complexities and issues that researchers encounter in the context of Arabic or Arabic-like text recognition in natural and document images. It sheds light on fundamental questions, such as a) How the complexity of Arabic as a cursive scripts can be demonstrated b) What the structure of Arabic text is and how to consider the features from a given text and c) What guidelines should be followed to address the context learning ability of classifiers existing in machine learning.

Unzipped Lauren Blakely 2019-01-14 Wanted: Dating coach to help hot nerd win back the woman of his dreams... Picture this - I'm ready to win back the love of my life, and I'm going big this time. We're talking boom box, sing her name in the rain, let the whole damn neighborhood know I'm good and ready this time around. After all, if you're going to grand gesture the ever-loving hell out of a second chance, you need to pull out all the stops. There's only one little problem. My college girlfriend isn't the one who shows up when I play my "I'll do anything to win you back" tune. The woman who flings open the second-floor window tells me my ex doesn't live here anymore. But she'll help me win her back. Anything for romance, anything for a guy so willing to go big for love. And that's what I want at first. Until I get to know my new "romance coach" and discover she's funny, clever, and keeps me on my toes. And boy, do I ever need that. Now I don't want to win anyone else's heart. I want the woman who's been helping me all along. Trouble is - she thinks I'm in love with someone else, and when we take off on a road trip, everything I think I know about women is about to be unzipped and turned inside out. *Unzipped is a standalone spinoff in the Lucky in Love series of standalones*

Cement Chemistry H. F. W. Taylor 1997 H F W Taylor was for many years Professor of Inorganic Chemistry at the University of Aberdeen, Scotland. Since 1948, his main research interest has been the chemistry of cement. His early work laid the foundations of our understanding of the structure at the nanometre level of C-S-H, the principal product formed when cement is mixed with water, and the one mainly responsible for its hardening.

Subsequent studies took him into many additional aspects of the chemistry and materials science of cement and concrete. His work has been recognized by Fellowships and by other honours and awards from many scientific societies in the UK, USA and elsewhere. This second edition of Cement chemistry addresses the chemistry and materials science of the principal silicate and aluminate cements used in building and Civil engineering. Emphasis throughout is on the underlying science. The book deals more specifically with the chemistry of Portland cement manufacture and the nature of the resulting product, the processes that occur when this product is mixed with water, the nature of the hardened material, the chemistry of other types of hydraulic cement, and chemical and microstructural aspects of concrete, including processes that affect its durability. Since the first edition of this book was published in 1990, research throughout the world has greatly augmented our knowledge in all of these areas. The present edition has been updated and revised to take account of these advances. The reader will acquire a solid understanding of the subject and will be better equipped to deal with the problems and pitfalls that can arise in engineering practice as a result of inadequate understanding of the relevant chemistry. It will serve both as an introduction to those entering the subject for the first time and as a guide to the latest developments for those already experienced in the field.

Meaning-based Translation Mildred L. Larson 1998 This textbook has been designed to emphasize the differences between languages and how this affects the translation of a text from one language into another. It is based upon the principle that the translator must first know the meaning of the source text before he can translate it into the receptor language. Meaning is presented as a structure which stands behind any text. Meaning-based, rather than form-based, translation is the goal of the textbook.

In *The Best Camera Is The One That's With You*, Chase reimagines, examines, and redefines the intersection of art and popular culture through images shot with his iPhone.
