Fundamentals of Digital Communication Upamanyu Madhow 2008-03-06 This is a concise presentation of the concepts underlying the design of digital communication systems, without the detail that can overwhelm students. Many examples, from the basic to the cutting-edge, show how the theory is used in the design of modern systems and the relevance of this theory will motivate students. The theory is supported by practical algorithms so that the student can perform computations and simulations. Leading edge topics in coding and wireless communication make this an ideal text for students taking just one course on the subject. Fundamentals of Digital Communications has coverage of turbo and LDPC codes in sufficient detail and clarity to enable hands-on implementation and performance evaluation, as well as 'just enough' information theory to enable computation of performance benchmarks to compare them against. Other unique features include space-time communication and geometric insights into noncoherent communication and equalization.

The State of the World's Biodiversity for Food and Agriculture Food and Agriculture Organization of the United Nations 2019-03-12 The State of the World's Biodiversity for Food and Agriculture presents the first global assessment of biodiversity for food and agriculture worldwide. Biodiversity for food and agriculture is the diversity of plants, animals and micro-organisms at genetic, species and ecosystem levels, present in and around crop, livestock, forest and aquatic production systems. It is essential to the structure, functions and processes of these systems, to livelihoods and food security, and to the supply of a wide range of ecosystem services. It has been managed or influenced by farmers, livestock keepers, forest dwellers, fish farmers and fisherfolk for hundreds of generations. Prepared through a participatory, country-driven process, the report draws on information from 91 country reports to provide a description of the roles and importance of biodiversity for food and agriculture, the drivers of change affecting it and its current status and trends. It describes the state of efforts to promote the sustainable use and conservation of biodiversity for food and agriculture, including through the development of supporting policies, legal frameworks, institutions and capacities. It concludes with a discussion of needs and challenges in the future management of biodiversity for food and agriculture. The Tip of the Iceberg Suveen K Sinha 2016-08-16 A wave of entrepreneurship has been sweeping across India. The success of start-ups like Flipkart, Snapdeal, Paytm, Ola and others has veered the discourse towards high valuations. But what we mostly see is very much the tip of the iceberg. Behind every high valuation of today is a story of blood, sweat, toil and tears. For every entrepreneur who has an amazing success story to tell, there are countless others who have fallen by the wayside. The going has often been a far cry from the presumed romance of breaking the mould, disrupting the order and changing the world. It is a desire to change the world that drives successful entrepreneurs, for they alone have the blind passion that is often the difference between success and failure, and they are the ones who love the journey more than the destination. Today, when questions are being asked whether the start-up party is nearing its end, whether we will soon see a rerun of the dot com bust of the early noughties, it is time to remember India's start-up warriors. This is the story of their remarkable journeys. Some found their destination. Some did not.
